

Syllabus For Physics 260, Fall 2015
Prof. Rabi Mohapatra

Lecture hours: TTh 2:00 pm-3:15 pm; Room: Phys. 1412

Text book for the course is: “**Physics for Scientists and Engineers**” by **Randall Knight, third edition (Pearson)**.

Office hours: Monday:2-3; Thursday 3:30-4:30; I am aware that these times may conflict with the class schedule for some of you. if that happens, come down to my office any other time by appointment. I am always available to help you. Do take advantage of the office hours starting early in the semester. The TAs will not have office hours. Contact and office : Rm 3156, Physical Science bldg; X56022; e-mail: rmohapat@umd.edu

Physics 260 is the second of a three semester introductory physics course physics for engineers. The course will consist of three regular hourly classes to be conducted by me and one hour-long discussion class for each section to be conducted by the TA plus a lab (Phys. 261). The final grade for the course will be based on the lab scores, home works, class quizzes, three midterms and a final. Lab is an important part of this course. If you do not pass the lab separately, you will not pass the course and have to retake the whole course again. So please pay special attention to the lab. Below is a detailed description of the organization of the course.

If you do not follow any math step discussed in the class, I can clear up in the office hours or ask the TA in the discussion class.

Discussion session: In addition to regular classes TTh 2-3:15, there will be a one hour discussion session every week. Please check the schedule of discussion classes for your section. Purpose of this session is to discuss the material that you went over in the class, solve problems (other than the ones assigned as homework) and clear up difficulties with concepts and math steps etc. Please attend these classes regularly and make good use of them.

Teaching Assistants: Your teaching assistant will take the discussion classes, grade midterms and quizzes. The TAs will not have any office hours. The office hours will be maintained by me. If you have any questions on the grades, home works, quizzes etc, you need to talk to me.

Important dates for Phys. 260 students; midterm dates are tentative and may change.

First day of classes	Aug. 31
Midterm I	Thursday, Oct.1
Midterm II	Thursday, Oct. 29
Midterm III	Thursday, Dec.3
Final Exam.	Tuesday Dec.15: 6:30-8:30 PM

Homeworks, Quizzes, Midterms and Grading

There will be one weekly 15 minute quiz in the class, on one of the two class days. The day of the quiz will be random depending on a suitable breakpoint between chapters and it will cover material covered up to the preceding week. The quiz will be graded and will count towards your final grade.

Online home works

There will be weekly online homework assignments; they will be graded and will count towards your final grade. The online homework assignments will be from the web site of the book

masteringphysics.com.

You need to register for this using the course ID below:

MPMOHAPATRA70151.

Registering in mastering physics should be done before the first day of class or at the latest before the end of the first week of classes. Talk to me if you need help with this during the first week of classes . There are time limits on the assignments and if you miss them once, there is no way to correct for this later on.

When solving problems, read the instructions carefully before you start working since there are only few chances to click on the answer button. Any technical problems with mastering physics website should be resolved by sending a message to **support@masteringphysics.com.**

Midterms

There will be three midterm exams and all of them will count towards the final grade. The final exam will cover material covered in the whole semester.

The **final grade** will be decided as follows:

Home works	45
Quizzes	45
Midterms; 3×50	150
Final	140
Laboratory	120
<hr/> Total	<hr/> 500

Missing an Exam: You must have a valid, medical excuse acceptable by the rules of the university to make up if you miss any of the midterms or the final exam. The excuse must be presented to the Professor and not the TA before the exam. How the missed exam will be made up will be decided by the professor at that time, assuming the excuse is acceptable. Under very special circumstance, an incomplete final grade may be issued- see the specific University rules for this and how an incomplete grade can be changed to a regular grade.

Responsibility: You are responsible for everything in every covered chapter, regardless of whether the material was specifically mentioned in the class or unless a specific section was explicitly excluded. Your goal should be to be proficient in the subject matter of the course and to acquire the ability to solve problems using the course material. *Please attend every class and read up the class material before coming to the class. This always makes it easier to understand the material.*

HELP AVAILABLE: If you have any difficulty at all understanding the material, please clear it up as soon as possible. If a difficulty is not cleared up right away, it generally leads to more trouble later on till it grinds your physics progress to a complete halt. It may then be too late. So (*let me repeat again*), clear up your difficulties as soon as they arise without any delay. **THIS IS VERY IMPORTANT!!**

Please take advantage of my office hours which are given above. If the announced hours are not convenient for some reason, I will also be available at times other than the announced office hours; send me a e-mail the day before you can come (rmohapat@umd.edu) to set up an appointment. If I am free, I will be happy to have you come in. This can earn you participation points which may be used as extra credit in determining your final grade, should you be on the border between two grades.

Always remember: key to really learning physics is to solve as many problems as possible and not necessarily the ones assigned in the class. Physics involves new ideas and new equations which are not part of your daily thinking. The more problems you solve, the more familiar you feel with the the ideas and equations and easier it becomes to use them for problem solving. Some suggestions to improve your understanding of the material:

- *Read the chapter being covered before coming to the class- so that you have some familiarity with the material- it is then a lot easier to stay focussed in the class.*
- Try to solve at least four or five physics problems every evening or early morning

in addition to assigned homework problems.

- A useful technique is to first form a visual image of the problem before you attempt to solve it. Draw diagrams for every problem. You will learn in the class how to do this in various cases. You can come to my office for help with this also.

Chapters from Randall Knight book Covered

A tentative schedule is as follows:

Date	Topics covered	chapter
Wk 1	09/01-09/03	Chapter 16
Wk 2	09/08-09/10	Chapter 17
Wk 3	09/15-09/17	Chapter 18
Wk 4	09/22-09/24	Chapter 19
Wk 5	09/29	Review Ch.16-19
Wk 5	10/01	Midterm I Chapters 16-19
Wk 6	10/06-10/08	Ch. 20
Wk7	10/13-10/15	Chapter 21,25
Wk8	10/20-10/22	Ch. 26,27
Wk 9	10/27	Ch.27+review
Wk9	10/29	Midterm II Ch.20,21,26,27
Wk 10	11/03-11/05	Ch. 28
Wk 11	11/10-11/12	Chapter 29
Wk12	11/17-11/19	Chapter 30+31
Wk13	11/24	Ch. 31
Wk14	12/01	review
Wk 14	12/03	Midterm III, Ch.28,29,30,31
Wk15	12/08-12/10	REVIEW for Final
Wk16	12/15: 6:30-8:30 PM	final exam:
