 Saurav:
 https://umd.zoom.us/j/96307519148

Pre-requisite: PHYS 260, PHYS 261, MATH 241

Co-requisite: PHYS 271 (lab course)

Course Description

This is the 3rd semester of a 3-semester sequence of calculus-based general physics for engineering students. I believe you have to master this material to go on in your engineering career. We will study electrodynamics, optics, special relativity, and quantum mechanics.

But maybe this course is more than just fulfilling requirements! As we know, the importance of good engineering in modern life cannot be overstated, and good engineering vs bad engineering (bad means mistakes!) can make a huge difference in all of our lives. Mistakes will happen, but it will be your job to guard against it. For instance, mistakes like these:

can cost lives and waste huge amounts of money. And, mistakes like these:

can not only cost you your job, but also your self respect!

So hopefully you will not only learn something about the fundamentals of physics, but you will also learn a little about how think like a scientist/engineer, which I know will help you have a successful career in engineering. And, hopefully, to not make the above kind of mistakes!

Note that this class contributes to UMD's General Education program. The Dean of Undergraduate Studies says "General Education offers students foundational learning experiences and exposes them to a diversity of disciplines and ways of thinking, and are intended to build competence, expand your understanding of the world, and foster creativity."

Syllabus

This syllabus is available online with a browser at http://www.physics.umd.edu/~drew/fall21/. I will also try to put this syllabus, or a pdf version of it, on the campus syllabus reporistory, which allows students to access it on Testudo. And lastly, it will be available on ELMS.

Textbook

The textbook for this course is "University Physics with Modern Physics, 14th edition" by Hugh D. Young and Roger A. Freedman, published by Pearson. Be careful here, they publish a 15th edition, but we aren't using it for this course because we are the 3rd of 3 courses and don't want to switch textbooks on you.

Most of you already have this book, but for those who do not, it will be available at the book store, and of course online, and if you get it online be sure to get the 14th edition. Note that the book is available in 2 parts, with the 1st part covering chapters 1-20 and the 2nd part covering chapteres 21-44 (we won't have time to go beyond chapter 40 unfortunately). Since this course will *only* be covering chapters in the 2nd part, if you buy the book, see if you can get Part 2.

Homework

Homework problems will be assigned throughout the term, using an electronic format called ExpertTA. You should do the homework before the due date, because after that the web site will close the assignment and you will not be able to turn it in even if it's late. Access will be via ELMS. Log in with your UMD Directory ID. If you are registerd for the course, you will see the course after login. Clicking on the first homework in ELMS will take you to the registration page for ExpertTA. After registration you will see the actual homework. We recommend you register as soon as possible before the first day of class and do the "Learning Expert TA" assignment, which is there to help you get familiar with ExpertTA. both in ExpertTA and ELMS. Full solutions for the homework assignments will be discissed at the discussion session with the TA, and I will see if I can post the solutions somewhere (probably on ELMS) so you can look at them.

Homework is how you train your mind. You are encouraged to work in any size group you feel comfortable with.

Lectures

Lectures are intended to help you with acquiring a basic understanding of the material. I will go over the relevant chapters, with an emphasis on demonstrations and problem solving, and how things work. There will be no attendance taken at the lectures, since you are all adults (you are old enough to drink, marry, have babies, drive cars, get tattoos, go to jail, join the army, etc.) so I will rely on you as young adults to do the right thing for yourself and your future as engineers. My advice is to attend all the lectures and not fall behind, this is a very fast paced course and one of the most important tactics to employ to get a good grade is to keep up with the material, do the work, and not fall behind.

Also, note that I may use the lectures to make announcements, and if I do I will try to also send around an email.

Discussion Sections

You will also have a discussion session each week, except at the beginning of the semester. The discussion session is designed to help you with your understanding of the material. My advice is to prepare in advance at least one question from the homework or the book that you are not sure about, and ask your TA to go over it. One piece of advice: don't go to the discussion and ask the TA to solve the problem, instead go and ask the TA to teach YOU how to solve the problem. There's a difference (you don't learn to shoot jump shots in basketball by watching your TA do it!).

Exams

We will have 3 "midterm" in-class exams, and a final. The midterms will cover around 4 chapters, and the final will be comprehensive.

The following schedule is tentative for the midterms and the final but it might change depending on how the class goes, what happens with covid delta, etc. I've scheduled the midterms so that they will be given on a Monday, so that you have the weekend to prepare. I realize things are pretty compressed!

Midterm 1: Monday, Oct 4, chapters 27-30 Midterm 2: Monday, Nov 1, chapters 31-34 Midterm 3: Mon, Dec 6, chapters 35-38

Final: Friday, Dec 17, 6:30-8:30pm, place TBD, cumulative

Midterm exams

The dates for the midterms are subject to change based on how well we are doing getting through the material, the weather, bomb threats, fire, etc. But for the most part you can pretty much count on those dates in the above table.

On exam day, bring a pocket calculator and writing tools (pens or pencils). You are not allowed to use your mobile device during the exam (we have to make a level playing field, which means no one can have the advantage of using google!), so be sure to bring a separate calculator (**not** the one on your smart phone!).

All exams are closed-book and closed-notes. However, you should prepare and bring a formula sheet (both sides are ok for formula) containing equations and values of fundamental constants, but EMPHATICALLY NO PROBLEM SOLUTIONS. The exam proctors may ask to take a look at your formula sheet, and if there are any problem solutions there, they may make you take the exam without it!

When the exams are handed back, I will post a distribution on ELMS (or somewhere if ELMS won't let me, I'll let you know) so that you can get an idea of how well you did relative to the class as a whole.

Note: only 2 of the mid term exams will be used in calculating your final grade for the course. I do this because in the complicated modern life, sometimes you will have to miss exams for all sorts of reasons (illness, family, legal, completely overloaded, etc). I have found that make-up exams are inherently unfair to the person who takes them (they are usually harder than the scheduled exam). So, to make things simpler, I will drop the lowest of the 3 midterm grades when making up your final grade. FYI, to do this, at the end of the semester I will normalize all 3 exams to have the same mean and standard deviation, and will use the two exams that have the best score relative to the mean and standard deviation for your grade, dropping the exam with the lowest score. This means that if you have to miss an exam, then I will drop that exam from your grade.

Note that if you miss the final, however, you will receive an incomplete (I) for the course provided that you have a passing grade up to that point.

Final exam

The final exam will be comprehensive. The date for the final exam is set by campus and will definitely be held at the noted time and date, however the campus final exam schedule has not yet been made official, so you should check here periodically (they say "mid semester). But it looks like our final will be Friday, December 17, 6:30-8:30pm. We will announce the location when the campus tells me.

Course Grade

Your final score will be based on your overall score for Homework, Midterms, and Final, using the following weights:

Homework	20%
2 Midterm exams	50%
Final exam	30%

As stated above, I will drop the lowest of the 3 midterm exam scores. The final letter grade will be based on the distribution of final scores for the entire class (this is called "curving"). That is, this is not one of those courses where you know what letter grade you get from the scores of each exam etc, you will have to wait.

Course Schedule:

Below is a preliminary schedule for what I will try to cover. However, given that life is full of fluctuations, and that we should all be flexible, I may make adjustments along the way. I will try to stick with the exam dates below, but as the semester progresses, we may have to make changes. If we do, I will discuss them with you beforehand.

PHYS 270 Fall 2021, 12:00-12:50, Toll Physics 1410 (vertical lines denote chapter boundaries)

Monday	Wednesday	Friday	
Aug 30	Sept 1	3	
INTRO to PHYS270	Ch 27 Magnetic field and forces	Ch 27 continued	
6	8 10		
Labor Day	Ch 27 continued	Ch 28 Magnetic field sources	
13	15	17

Exam 2, Ch 31-34	Ch 35	Ch 35	
8	10	12	
Ch 36 Diffraction	Ch 36	Ch 36	
15	17	19	
Ch 37 Relativity	Ch 37	Ch 37	
22	24	26	
Ch 38 Photons	Thanksgiving		
29	Dec 1	3	
Ch 38	Ch 38	Ch 39 Particles	
6	8	10	
Exam 3, Ch 35-38	Ch 39	Ch 40 Quantum mechanics	
13	15	17	
Ch 40		Final Exam, 6:30-8:30, TBD	

Campus Calendar

Campus maintains a calendar, and they are pretty serious about it. You might want to be sure you are familiar with it. Just click on the previous link.

Honor Code

It goes without saying that you are on your honor to play fair and not cheat. And as future engineers, you will find that cheating never works, and people who cheat end up falling behind one way or another eventually. Espcially in engineering! Anyway I don't expect any of you will be dishonest, but I have to pass along the following:

The University of Maryland has a nationally recognized Code of Academic Integrity, administered by the Student Honor Council. This Code sets standards for academic integrity at Maryland for all undergraduate and graduate students. As a student, you are responsible for upholding these standards for this course. It is very important for you to be aware of the consequences of cheating, fabrication, facilitating academic dishonesty, and plagiarism. Violations will be taken very seriously and may result in an XF grade for the course and possible suspension. For more information on the Code of Academic Integrity or the Student Honor Council, please visit http://www.shc.umd.edu/.

Collaboration

Working together with other students is part of the course; in fact, the tutorials and labs are specifically designed around teamwork. Working together to figure out the homework is also encouraged, but you must turn in your own work. Talking about how to work the problem is fine if it helps you to understand it better, but COPYING A SOLUTION IS STRICTLY FORBIDDEN. IF CAUGHT ENGAGING IN SUCH ACTIVITIES, YOU MAY BE REFERRED TO THE STUDENT HONOR COUNCIL.

Religious observances

If you need to miss class, a deadline, or an exam due to a religious observance, please notify me in advance, preferably at the beginning of the semester.

Students with disabilities and/or special needs

Accommodations will be provided to enable students with documented disabilities to participate fully in the course. Please discuss any needs with me at the beginning of the semester so that appropriate arrangements can be made. Students who are registered with DSS, and who are planning to take examinations at DSS facilities, are required to let me have the pertinent authorization forms in editable electronic format at least one week prior to each exam date.

Weather and emergency closures

If the University is closed due to inclement weather or some emergency situation on the scheduled date of an exam, then the exam will be given during the next class period when the University is open. If the University is closed on any non-exam day, including just before an exam, then the exam will still be given according to the original schedule. In these or other exceptional circumstances, I will attempt to send out information by email.

Course announcements by email and email usage

I will be sending important announcements to the class, specifically to each student's umd.edu email address, as reported to me by the UMEG system, which gets your email from when you logged into Testudo (or from terpmail if you did not specify it with Testudo). If you use some other email system, please make sure that mail sent to your umd.edu address is successfully forwarded to the address you use most regularly. If you have a question, and you can't get to the TA or to my office hour, then you can send it to me via email. I will respond as soon as I can.

Copyright Protection of Course Materials

Unless indicated otherwise, any lecture handouts, exams, homework and exam solutions, and the lectures themselves (including audio and video recordings) are copyrighted by me and may not be distributed or reproduced for anything other than your personal use without my written permission. (The University makes me say this!)
